
Backend Developer

[Singapore]

Job Description

Eyeota is looking for an experienced Backend Developer to join our team in Singapore and be instrumental in taking our products to the next level. In this role, you will be working in close collaboration with a team of highly empowered, experienced developers who are building a high-performance, highly scaled global platform.

You:

- Want to conceive, build, and operate highly distributed systems deployed around the planet
- Employ cutting-edge technologies and techniques in a rapidly evolving domain
- Thrive in a progressive, environment which relies on communication and initiative rather than process to deliver at a high velocity
- Have a "Product Owner" rather than a "Task Implementor" attitude
- Are curious and always improving your skillset

Desired Qualifications:

- Experience building systems involving messaging and/or event-driven architectures
- Deep technical understanding of at least one of core Java or Golang
- Strong handle on concurrency challenges and design solutions
- Strong buyer of Agile/Lean values
- Heavy emphasis on code testing and designing for testability
- Maturity and aptitude to operate in a high-freedom/high-responsibility environment
- Strong troubleshooting skills
- Experience with techops, supporting and troubleshooting large systems
- Exposure to devops automation such as Chef, and Ansible
- Exposure to IAAS platforms such as AWS EC2, Rackspace, etc...
- Experience with Apache Cassandra, Hadoop, or other NoSQL databases
- Involvement in an open-source community

About Eyeota

Eyeota provides a dynamic, fun workplace filled with passionate individuals. We are at the cutting edge of advertising technology and there is never a dull moment at work.

We have a truly global footprint, with our headquarters in Singapore and offices in Berlin, London, Melbourne, New York, Sydney and Tokyo.
